

Project Review Part 1: Code Review Criteria - Group 3

Coding Criteria:

- Use proper and specific names when declaring variables
- Align code correctly
- Know how to explain the code
- Maintainable code

Documentation Criteria:

- When creating documents for the project, grammar and spelling must be corrected for other group members to read and understand.
- Each document must have a heading of the section that the document is going to present.
- If there are changes to our project, at least one group member must update the document so the document will not have outdated information.
- Document must be in an order in which it flows from one topic to another.
- If a groupmate updates the document, the group member must communicate to the group and tell them what part of the document was updated. (Unless the group member was already assigned to that part of the document before updating).
- If there is a topic/section that is important to the documentation, the group member that is assigned to that topic must be detailed and add important

information for the topic to convey the information that is needed for that topic/section.
